ELECTRONICS INSTALLATIONS
CHUGUCHAK (T'A-CH'ENG), CHINA

A search of the Chuguchak (T'a-Ch'eng) area in northwestern China, 46-45N 82-75E, was conducted to determine the location of a reported newly-constructed possible military electronics installation (Figure 1).

Detailed examination of the area on excellent quality [] photography revealed two installations, a suspect electronics facility and a probable direction finding (DF) station (Figure 2). The suspect electronics facility is located approximately one nautical mile (nm) east of Chuguchak in the western section of the old walled city. It consists of one large and three small buildings and a centrally located lattice tower (Figure 3). Located on top of the lattice tower are two arms or antennas forming a cross pattern. At the terminus of each of the crossed arms is a probable reflector plate. A comparison of the observer's report with the [] photography indicates that the possible function of this facility could be either a broadcasting station with a top-loaded antenna, a direction finding station, or a jamming station. Although the general appearance of this installation agrees with the observer's report, specific details described in the report cannot be confirmed through photography. 25X

The probable DF station is located approximately three nm northeast of Chuguchak and consists of a support area and an antenna field. The support area contains one large building and four small structures at the terminus of a service road. The antenna field contains two square-shaped ground patterns probably to support DF antennas (Figure 4). Although the antennas cannot be identified due to the limits of the photography, positive identification is possible of the mast and anchor bases. 25X
